**Subject:** Free virtual & dry lab activities to help near-term

Dear Dr. <deleted>,

The COVID-19 is affecting teaching and learning around the globe. To help, Catalyst Education offers a three (3) week ready-to-use [Labflow](#) course for free that can be done online and at home by students. Each week, students:

- Watch pre-lab videos of real experiments, equipment use and fundamental chemistry concepts.
- Complete pre-lab homework activities (auto-graded) relating to each week's videos and the virtual lab they are about to perform.
- Perform a virtual lab experiment to generate experimental data.
- Enter the experimental data, report calculated results and answer post-lab questions (all auto-graded).
- Describe gen chem and organic solution.

Coordinators will have access to grades for all of the activities that can be downloaded and imported into the university LMS.

Catalyst Education's [Labflow](#) is created and supported by chemical educators such as yourself. With the recent outbreak of COVID -19 and cancellation of classes, [Labflow](#) can help.

Please click <https://calendly.com/jamescaras> and speak with a chemist about this program.

Thank you,

Dave Price
